

# Table of Contents

<b>Preface</b>	<b>ix</b>
<b>PART I</b>	<b>1</b>
<b>Chapter 1. The Pythagorean Theorem and Its Extensions</b>	<b>3</b>
1.1 Al-Kashi (Carnot) Theorem.....	5
1.2 Vector Space on $\mathbf{R}$ ; Scalar Product in $\mathbf{R}^2$ .....	5
1.3 Extension to $\mathbf{R}^n$ ; Weighted Scalar Product.....	7
<b>Chapter 2. Recalling Sequences &amp; Series</b>	<b>9</b>
<b>Chapter 3. Hilbert and Metric Spaces</b>	<b>11</b>
3.1 Infinite Dimensional Vector Spaces; The Space $L_w^2$ .....	12
<b>Chapter 4. Fourier and the Trigonometric Series</b>	<b>15</b>
4.1 On the Convergence of Trigonometric Series.....	19
<b>Chapter 5. Applications</b>	<b>21</b>
5.1 The Dirichlet Problem for the Laplace Equation in a Circular Domain.....	21
5.2 The Heat Problem.....	24
5.3 The Wave Problem .....	26
<b>Chapter 6. Orthogonal Polynomials</b>	<b>29</b>
6.1 General Properties of Orthogonal Polynomials.....	29
6.2 The Classical Orthogonal Polynomials.....	31
6.3 Chebyshev Polynomials .....	32
6.3.1 First Kind and Second Kind Chebyshev Polynomials	34
6.3.2 Third Kind and Fourth Kind Chebyshev Polynomials	36
6.4 Non-Trigonometric Fourier Series .....	37

<b>Chapter 7. Grandi (Rhodonea) Curves</b>	<b>39</b>
<b>Chapter 8. Pseudo-Chebyshev Functions</b>	<b>43</b>
8.1 Basic Properties of the First and Second Kind PCF .....	43
8.2 The Case of Half-Integer Degree .....	44
8.2.1 Orthogonality of the First and Second Kind PCF ..	45
8.3 Basic Properties of the Third and Fourth Kind PCF .....	47
<b>PART II</b>	<b>51</b>
<b>Chapter 9. From Lamé Curves to Gielis Transformations</b>	<b>53</b>
9.1 Riemann’s Geometric Ideas .....	53
9.2 Lamé Curves and Superellipses .....	55
9.3 Trigonometry of Supercircles and a Generalization of $\pi$ ...	57
9.4 From Superellipses to Gielis Transformations .....	61
9.5 Generalizations .....	64
9.6 Supercircles and Superparabolas .....	64
<b>Chapter 10. Waves and More</b>	<b>69</b>
10.1 Relations to Chebyshev and Pseudo-Chebyshev Forms and to Fourier Series .....	69
10.2 Coordinate Functions of First and Higher Order and Square Waves .....	72
10.3 Higher Dimensions .....	74
<b>Chapter 11. Stretchable Rulers and Integer Shapes</b>	<b>79</b>
11.1 Stretchable Rulers .....	79
11.2 Shapes as Integers .....	81
<b>PART III</b>	<b>83</b>
<b>Chapter 12. Solution of Problems in Gielis Domains</b>	<b>85</b>
12.1 The Laplacian in Stretched Polar Coordinates .....	85
12.2 The Dirichlet Problem for the Laplace Equation in Gielis Domains .....	87

12.3 The Heat Problem in Gielis Domains .....	89
12.4 The Wave Equation in Gielis Domains .....	93
<b>PART IV</b>	<b>99</b>
<b>Chapter 13. From Universal Natural Shapes to Scientific Methodology</b>	<b>101</b>
13.1 Universal Natural Shapes .....	101
13.2 A Wide Range of Natural and Abstract Shapes .....	103
13.3 What Can We Do With Two (or Three) Parameters? ....	106
13.4 Chebyshev for Botanists .....	111
<b>Chapter 14. Understanding Life</b>	<b>115</b>
14.1 Commensurability and Computability .....	115
14.2 Constant Anisotropic Mean Curvature Surfaces .....	116
14.3 Natural Shapes from a Geometrical Vantage Point .....	120
14.4 Curvature Can Be Based on the Shape Itself .....	122
14.5 New Lenses for 20/20 Vision in the Natural Sciences ....	124
<b>Chapter 15. Trigonometry on the Diamond</b>	<b>129</b>
15.1 D-Fourier Polynomial Expansions .....	130
15.2 Nature: An Endless Source of Inspiration .....	133
<b>References</b>	<b>135</b>
